

Course project

Description of Bussiness

- It is about selling jewellery online, currently this web app can only allow admin of web app to add custom products and users can comments over a particular item.

Comparing with figma-wireframing

- On comparing with figma screenshots I have maintianed structure of the web app and successfully added user authentication to this web app but I failed to add “buy now” and “add to cart button” functioning into this web app which is must for an online business app.

Instructions to run project

- It is simple to run web app ,firstly initiate database with code “mongod” and than run web app with “node app.js” command
- Then opening “running URL and Port ” button will take to link to the webpage

Feature And Content Explanation

- Adding new item
 - A user can add a new item to database by posting a form with item details
- Editing current item
 - User can also edit data of current items and save it to database
- Deleting current item
 - A user can delete an item for database
- Adding comments
 - A user can add comments to any of current item
- User authentication
 - User can sign-in and sign-up to the add and save their credentials to data base
